

THE DIFFERENCE IS KNOWING

Simplify, less is better.

Some people are fine having downtime and stocking extra spare parts, if you are not one of them consider the new Camflex GR. Designed using the proven and reliable Camflex design, this new valve will drop right in place of your reciprocating globe valve. The result will be a simpler valve, proven with over 1.2M installed and backed up by customers who say, "there is no better valve on the market than a Camflex". More importantly, with the Camflex GR you have **fewer parts to manage, saving you money**. That's because the Camflex has one plug design per valve size to cover the full Cv range, whereas reciprocating globe valves use a unique plug for each trim size. Simply stated, why have 10 plugs when you only need one with the Camflex GR. **The difference is knowing.**

BHGE's ValvFAST Program

BHGE has designed a series of modular kits across a family of products to meet critical market demands. Certified ValvFAST channel partners near you help ensure that the Masoneilan valves you need will be on the shelf and waiting—so you can prepare for the unexpected before it happens. Get the valve you need in as little as 24 hours instead of weeks. Improved uptime and reduced downtime add up to bottom-line savings for your business.
