

How do you make emission leaks a thing of the past?

Environmental agencies are cracking down on end users and enforcing emission standards. Consent decrees, fines and lawsuits are being imposed. **So why are you wrestling with all of these issues when you can eliminate those headaches?** The Camflex GR has 50% fewer potential leak paths than a reciprocating globe valve and comes standard with a low-emissions packing system. When you really think about it, there is no decision to make except a Camflex GR. Make your life easier and replace your reciprocating valve with a Camflex GR.

Environmental headaches? It's simple. The answer is Camflex GR

BHGE's EF* seal (Emissions Free seal) technology is standard and meets a variety of global standards
