Features and Benefits

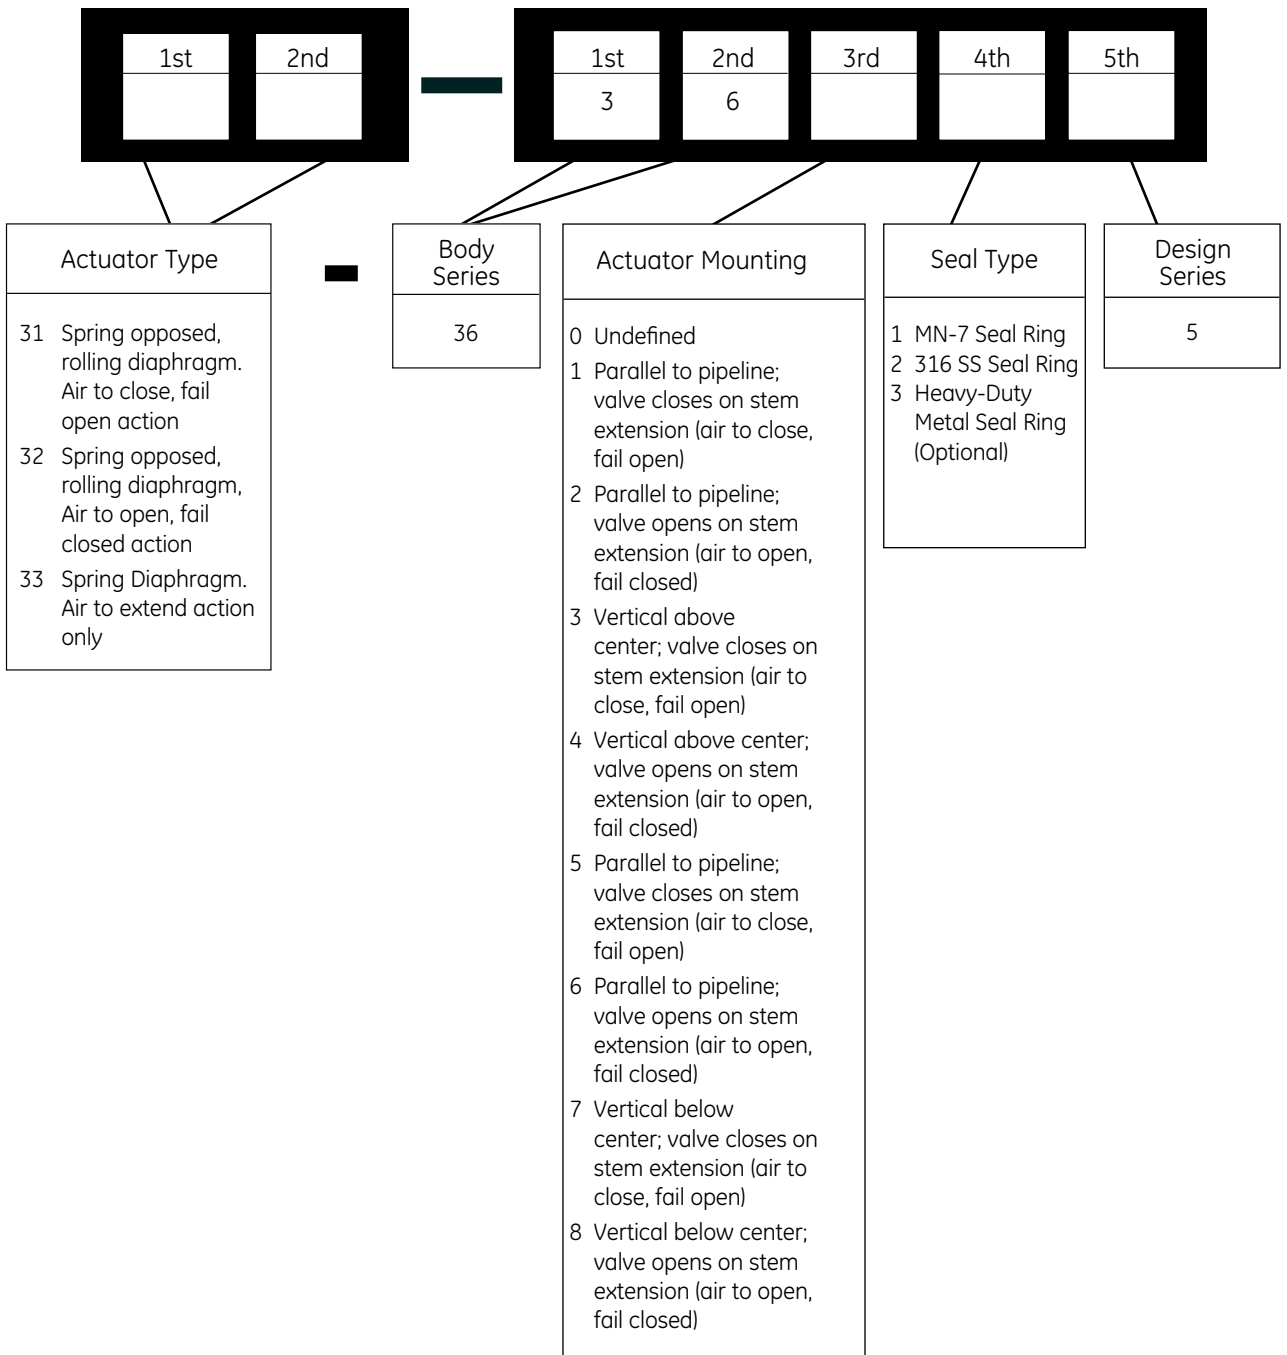

The V-Max* rotary control valve offers high-capacity, heavy-duty automatic throttling capability. The valve's advanced design features offer substantial benefits, including:

- **Simplified alignment.** The valve's integrally cast raised face flanges (in compliance with ASME 150 or 300 Class standards) eliminate the need for long tie rods, significantly simplifying the alignment process.
- **Installation flexibility.** To meet a variety of application needs, the valve is available with two different face-to-face dimensions: standard construction complies with ISA S75.04 and IEC 534-3-2 standards and a short pattern complies with the ANSI B16.10 standard (ANSI class 150 only).
- **Enhanced flow capacities.** A straight-through flow pattern provides exceptional capacities, while the patented dual-characterized V-port ball combines an equal percentage flow characteristic with high capacities and greater than 500:1 rangeability.
- **Excellent leakage control.** A standard EF (emission free) seal packing system provides long-term, zero leakage[†] shaft sealing performance.
- **Flexible, reliable shutoff options.** Three different seal types provide flexible solutions for a variety of applications.
 - MN-7 Seal Ring – This low-friction polymeric seal ring provides reliable Class VI shutoff capability.
 - 316 Stainless Steel Seal Ring – This unique seal ring design does not require shims. It achieves Class IV shutoff and higher temperature capability when combined with satellite bearings and flexible graphite packing.
 - Optional Heavy-duty Metal Seal Ring – This optional (NPS1-6) heavy-duty seal ring provides long service life in harsh applications. The wiping action of the seal ring against the ball prevents buildup of contaminants, helping maintain long-term performance and reliable Class IV shutoff.
- **Reliable operation, simplified maintenance.** Full involute spline connections on plug, shaft, and actuator connections virtually eliminate backlash, enhancing operational reliability and simplifying maintenance needs. Changing the ring seal requires only the simple removal of two machine screws on the inlet flange.

Actuator Models 31 and 32 (Size D)

General Data

■ Body

Type:	Cast with integral bonnet
Flow Direction:	Flow to open
Materials:	Carbon steel 317 Stainless steel
Body Pressure Rating:	ANSI 150 or 300 Depending on flange rating
End Connections:	Flanged – bolts to ANSI Class 150 or 300 rated flanges (1-inch to 12-inch) (DN 25 – 300)

■ Trim

Plug Type:	Dual characterized, high capacity “V” contoured segmented ball
Material:	317 Stainless steel, hard chrome plated
Seat Ring:	MN-7, Standard Metal and Heavy Duty Metal
Materials:	MN-7 Polymeric reinforced PTFE 316 Stainless steel Standard Metal Nitronic 60 Heavy Duty metal (Optional NPS 1-6)
Retainer:	317 Stainless steel
Capacity:	High capacity ball valve
Flow Characteristic:	Equal percentage
C _v Ratio:	Greater than 500:1

■ Actuators

Spring-Opposed Diaphragm – Model 33

Size	
AC:	30 in ² (194 cm ²) 2.25-inch (57.2 mm) Stroke 1-inch to 2-inch Valves (DN 25-50)
B:	70 in ² (452 cm ²) 2.625-inch (66.5 mm) Stroke 2-inch to 4-inch Valves (DN 50-100)
C:	140 in ² (903 cm ²) 2.625-inch (66.5 mm) Stroke 3-inch to 12-inch Valves (DN 80-300)

Range

AC:	7-15 psi
B:	7-16 psi
C:	9-16 psi
Air Connection:	1/4 NPT
Yoke:	Cast iron
Bearing:	Sealed radial ball
Auxiliary Handwheel	
AC:	Optional solid disk with locking nut
B:	Optional rising stem push type
C:	Optional rising stem push type

Spring-Opposed Rolling Diaphragm – Model 31/32

Size D:	60 in ² (387 cm ²) 4.00-inch (101.6 mm) Stroke 6-inch to 12-inch Valves (DN 150-300)
Range D:	12-28 psi 17-40 psi 29-68 psi
Air Connection:	1/4 NPT
Yoke:	Cast iron
Bearing:	Sealed radial ball
Manual Override:	Option jackscrew gear

Temperature/Seat Leakage

Standard Metal Seal Ring Temperature Limitations

A strain hardened 316 stainless steel seal ring is an available option when the MN-7 Seal is not suitable. Seat leakage is per ANSI /FCI 70.2 Class IV. The metal seal ring can be used with either MN-7 lined bearings or the optional solid metal bearings. The fluid temperature is limited to 425°F (218°C) when using the MN-7 lined. A high temperature package consisting of metal seal ring, bearings and flexible graphite packing elevates fluid temperature limitations to 600°F (316°C) maximum or ANSI working pressure and temperature limitations. For use in lubricated service only.

MN-7 Seal Ring Temperature Limitations

The standard MN-7 seal ring provides tight, ANSI/FCI 70.2 Class VI seat leakage. Pressure and temperature ratings of this design are limited as shown in the chart below as well as those shown in the corresponding pressure drop tables.

(Optional) Heavy Duty Metal Seal Ring (Bi-directional Flow)

A solid Heavy Duty Metal seat ring is available (NPS 1-6) when the MN-7 or Standard Metal Seal ring is not suitable. The Heavy Duty Seat ring must be used with solid metal bearings. Fluid temperature is limited to 500°F (260°C) due to the material of the radial seal. Seat leakage is per ANSI/FCI 70.2 Class IV.

- 1** Zone of maximum temperature limits
- 2** Zone of maximum pressure limits
- 3** Zone of maximum interactive pressure/temperature limits

Notes:

1. Conforms to ASME/ANSI Standard B16.5 - 1996 "Pipe Flanges and Flange Fittings."
2. Conforms to ISA Standard S75.04.
3. Conforms to ASME Standard B16.10 - 1992 (formerly ANSI Standard B16.10 - 1973) Short Pattern Ball. Available for ANSI 150 Class Valves ONLY.
